Latest Stable Python Release Report

Summary of Findings
Based on verified release information from **Python.org**, the latest major stable series of Python is **Python 3.13** (originally released on October 7, 2024), with ongoing bug-fix and security updates. Additionally, development versions such as Python 3.14 and 3.15 are currently active in pre-release or newer series.

Key Highlights of Python 3.13:
- **New Interactive Interpreter**: Powered by a better interactive interpreter featuring multi-line editing and color support (adapted from PyPy).
- **Free-Threaded Build Mode (PEP 703)**: Experimental support for disabling the Global Interpreter Lock (GIL) to allow true multi-core concurrency.
- **Experimental JIT Compiler (PEP 744)**: Introducing foundational work for significant runtime performance improvements.
- **Extended Support Policy**: Under PEP 602, Python 3.13 and later feature 2 years of full bug-fix support followed by 3 years of security fixes.
